Book description The link gives the title of the book, which is available for at AbeBooks.com in various formats. John Hobbs, Professor at the University of Cambridge, has described the book as follows, "This is a straightforward, compact book that explains a few of the most important historical perspectives and approaches to the development of sociology. Haralambos and Holborn (1988) wrote it before the undergraduate sociology boom, when the unit 'Sociology' was introduced into most UK universities, and so are interested in showing how social theory was structured before all the theory crowd came to take over the subject. Their book is very accessible to those who are just going to take A-levels or GCSEs, or have taken the AB pass (which is the coursework that most of our A-level students take). The book adopts a reading order of 'Sociology: Themes and Perspectives' first, 'History and theory' second and 'Questions and approaches' third, and so the first chapter is about 'Perspectives'. The book is a model of how to teach Sociology at A-level, and its picture of a seminar course of lectures on Sociology is accurate, as the unit of Sociology at most universities now moves away from the lectures-papers-exams model in its newer forms towards something more like the unit as it is described in Haralambos and Holborn (1988). There is a chapter on 'Theories' - which is very useful - but the good thing is that it does not necessarily make you read Theories II to IV - the whole point of a course like this is that it teaches you sociology and what society is, without having to read all of the 'Theories of...'. It is a very comprehensive text, compact but packed with information."
